

{loadposition user6} Owned and operated by Belizeans, for over four decades Pelican Beach Resorts and the Bowman family have been active in cultural, community and conservation issues in Dangriga and throughout Belize. We are committed to Belize's development in a sustainable and responsible manner.

Dangriga

Pelican Beach Resort was the brainchild of retired citrus farmer Henry Bowman Sr. (popularly known as "HTA"). Construction on the hotel began in 1969, and Pelican Beach opened for business in 1971 with 10 rooms and a restaurant and bar. At first, tours were only offered to the family's modest vacation home on the island of South Water Caye.

Dangriga (then called Stann Creek Town) was little known as a tourist destination. This soon changed as the enthusiasm of Henry Bowman Jr. and his wife Alice, coupled with their considerable management and cooking skills, coaxed a steady stream of researchers, student groups and families to visit. Dangriga (then called Stann Creek Town) was little known as a tourist destination. This soon changed as the enthusiasm of Henry Bowman Jr. and his wife Alice, coupled with their considerable management and cooking skills, coaxed a steady stream of researchers, student groups and families to visit.

A private airstrip built adjacent to the hotel was the main conduit for visitors, who were flown in from Belize City in a four seater Cessna 182. The airstrip was later donated to the town by Pelican Beach Resort and is now the Dangriga Municipal Airstrip, accommodating hourly flights every day. Other guests arrived via the Hummingbird Highway in taxis, buses and open-backed trucks.

At night, by the light of a beach bonfire, visitors shared the music and culture of the Garifuna people. By day they took tours to the offshore reef, the Mayan temples in the west and the rainforest in the south; or engaged in such popular activities as fishing, snorkeling and bird watching.

Carrie Bow Caye

In 1972 a tropical storm led to a chance meeting between H.T.A Bowman Sr. and researchers from the Smithsonian Institution on the tiny Carrie Bow Caye, named after H.T.A.'s wife "Carrie Bowman". The scientists were looking for a suitable location to establish a marine field station and the one acre island of Carrie Bow, right atop the barrier reef and 14 1/2 miles off the coast of Dangriga, soon became that location.

Thus began the collaboration between the Bowman family and the Smithsonian Institution, which now spans over 3 decades and continues to flourish today. The areas surrounding the Carrie Bow Field Station, including the nearby South Water Caye, have been categorized as some of the most studied mangroves and coral reef in the entire Caribbean.

South Water Caye
